Sample QA report

Format you receive with every order · Example from my own app (LifeOS, a Next.js web app) · Sign-up form, desktop Chrome

Summary

Scope	Sign-up form: field labels and autocomplete (accessibility checks)
Bugs found	2 (1 Major, 1 Minor), both filed in Jira with evidence
Recommendation	Fix both before launch; each fix is a few lines of HTML

BUG-1 · Sign-up inputs have no labels Major

Environment	Google Chrome, Linux
Steps to reproduce	1. Open the landing page 2. Click "Sign up" 3. Inspect the 4 inputs in DevTools (Elements + Accessibility pane)
Expected	Each input has a visible label or aria-label (WCAG 2.2 · 3.3.2 Labels or Instructions)
Actual	All 4 inputs rely on placeholder text only: no <label>, aria-label, name or id
Impact	Assistive technology gets no field name; the placeholder hint disappears while typing
Evidence	Screenshot attached to the Jira ticket
Suggested fix	Add <label for=⋯> to each input

BUG-2 · No autocomplete on email and password Minor

Steps to reproduce	1. Open Sign up with a password manager installed 2. Focus the email field
Expected	Browser / password manager offers to fill (WCAG 2.2 · 1.3.5 Identify Input Purpose)
Actual	No suggestion; inputs have no name, id or autocomplete attribute
Suggested fix	autocomplete="email" / "new-password" / "current-password"

Every order includes: a short test plan you approve first · each bug with steps, expected vs actual, severity and screenshot or video · a summary you can forward to your developer.
